SUMMARY

Backend engineer building APIs and server-side systems with Node.js, TypeScript, MySQL, and MongoDB, including a trust application API with atomic transactions, validation, and automated tests. Before backend, spent 4+ years as a frontend engineer on financial and government platforms, working closely with backend teams on authentication and API performance, and recently completed AltSchool Africa's backend engineering diploma to make the shift formal. Looking for a team to ship reliable backend systems and grow into more complex, production-scale work.

TECHNICAL SKILLS

Backend: Node.js, Express.js, PHP/Laravel, REST API Design, JWT Authentication, Socket.IO, node-cron

Databases: MySQL, Prisma, MongoDB

Testing & Tools: Vitest, Supertest, Git/GitHub, Postman, Docker
Languages: JavaScript (ES6+), TypeScript, PHP

BACKEND PROJECTS

Cedrus API — Trust Application Backend | Node.js, TypeScript, Express, Prisma, MySQL, Zod
Built a production REST API processing multi-step trust applications through a 5-stage pipeline (validation, file persistence, atomic DB write, email dispatch, logging) with a UUID correlation key for end-to-end traceability. Modeled a normalized relational schema in Prisma/MySQL with cascading sub-tables; implemented Zod validation with cross-field business rules. Hardened with Helmet, CORS, and rate limiting; covered by a mocked Vitest and Supertest suite.

Blog API — RESTful Blogging Platform | Node.js, Express
Built a REST API with JWT authentication, draft/publish workflow, rate limiting, Cloudinary uploads, and Sentry monitoring; covered by a Vitest and Supertest test suite.

Task Management App — Full Stack To Do Application | Node.js, Express
Built a full stack task manager with JWT and session authentication and a pending to completed to deleted task lifecycle; modular architecture tested with Vitest against an in-memory MongoDB instance.

Real Time Multiplayer Guessing Game | Node.js, Express, Socket.IO
Built a real-time multiplayer guessing game with shareable session codes, a live scoreboard, and in-game chat synced instantly across clients.

EXPERIENCE

Front End Engineer — Golden Edge Softech, Lagos, Nigeria | April 2022 to Present

- Worked directly with backend engineers to design and optimize API calls, reducing response times by 35%
- Implemented JWT-based authentication flows and role-based access control across multiple permission levels
- Built a real-time chat feature with WebSocket for an artisan marketplace platform
- Led frontend delivery on an enterprise product alongside two backend developers, contributing to 200% revenue growth

Web Developer (Contract) — Eco Diversified Network & Elafris Hub | September 2021 to December 2024

- Built and maintained websites for an NGO client and an agency's customer base, managing CMS content, SEO, and custom WordPress-based solutions

EDUCATION & CERTIFICATION

AltSchool Africa — Diploma, Backend Engineering, 2026

Tai Solarin Federal University of Education — B.Sc. Computer Science, 2022
